Made In The USA

- **The Only Eco-Friendly ABS Filament**

Unlike every other ABS filament on the market, Enviro is specially formulated to degrade once it enters an active landfill facility or a commercial compost. We have blended a bio additive with ABS creating a material that allows for bacterial consumption.

- **Premium Quality Filament Made in the USA**

The filament itself is made with 100% virgin resins to the strictest standards available, and it maintains a dimensional accuracy better than +/- 0.03mm.

- **Eco-friendly Packaging**

The spool is made of recycled biodegradable cardboard that is secured with a recyclable tin end cap. Enviro also comes with a seed paper card printed with soy-based inks and embedded with annual and perennial wildflower seeds.

- **Resealable Bag**

Every spool of Enviro comes with a re-usable, re-sealable plastic bag to help extend the life of the filament once it is opened.

- **Environmental Contribution**

3D Printlife is committed to reducing the environmental impact of 3D Printing. For every spool of Enviro sold 3D Printlife will donate \$1 to the Nature Conservancy's "Plant a Billion Trees" fund, rejuvenating iconic forests in key locations throughout the United States.
