Made In The USA

- **PLA Enhanced with the Strength and Pliability of ABS**  
PLAYyPHAb is 100% biodegradable like PLA, but is comparable to ABS in terms of it's impact strength and pliability. PLAYyPHAb has excellent layer adhesion, produces a glossy finish, and provides increased UV stability.
- **Premium Quality Filament Made in the USA**  
PLAYyPHAb is made with 100% virgin resins to the strictest standards available, and it maintains a dimensional accuracy < +/- 0.03mm.
- **Eco-friendly Packaging**  
The spool is made of recycled biodegradable cardboard that is secured with a recyclable tin end cap.
- **Resealable Bag**  
Every spool of PLAYyPHAb comes with a re-usable, re-sealable plastic bag to help extend the life of the filament once it is opened.
- **Environmental Contribution**  
3D Printlife is committed to reducing the environmental impact of 3D Printing. For every spool of PLAYyPHAb sold, 3D Printlife will donate \$1 to the Nature Conservancy's "Plant a Billion Trees" fund, rejuvenating iconic forests in key locations throughout the United States.
