

# Electro Magnetic Compatibility Test Report Regarding the CE Mark Compliance of the Aleph Objects – LulzBot TAZ 5 – 3D Printer

In Accordance with the Information Technology Standards  
EN 55022:2010 for Emissions  
And  
EN 55024:2010 for Immunity

## Report Revision History

Revision	Date	Reason
1.0	23 February 2015	Initial Release

Test Specification: EN 55022:2010 and EN 55024:2010

Prepared by EMI Test Lab - EmiTestLab.com

Model Name of EUT: LulzBot TAZ 5

Manufacturer: Aleph Objects Inc.

## Description of Equipment Under Test (EUT)

Test Item : LulzBot TAZ 5 – 3D Printer  
Manufacturer : Aleph Objects, Inc.  
Receipt date : 28 January 2015

## Manufacturer's information

Manufacturers  
Representative : Chris Wagner  
Company : Aleph Objects, Inc.  
Address : 626 West 66<sup>th</sup> Street  
Loveland, Colorado 80538  
U.S.A.  
Website : <https://www.alephobjects.com/index.html>

## Tests Performed at

Address : EMI Test Lab LLC  
1822 Skyway Drive Unit J  
Longmont, Colorado 80504  
U.S.A  
Website : <http://www.emitestlab.com/>

Test Specifications : EN 55022:2010 and EN 55024:2010  
Tests completed : 4 Feb 2015

Result of Testing : **The EUT is in Compliance with EN 55022:2010 and EN 55024:2010**

Senior EMC Engineer : Dennis King

Report written by : Dennis King – EMI Test Lab  
Test Plan : Dennis King for Aleph Objects  
Report date : 23 February 2015

***These test results relate only to the specific unit that was tested. A periodic production audit to verify continued compliance is recommended.***

Test Specification: EN 55022:2010 and EN 55024:2010      Prepared by EMI Test Lab - EMI Test Lab.com  
Model Name of EUT: LulzBot TAZ 5  
Manufacturer: Aleph Objects Inc.      Revision 1.0

## 1 General

### 1.1 Applied Standards

The LulzBot TAZ 5 3D Printer was evaluated for emissions using EN 55022:2010 and for immunity using EN 55024:2010.

EN 55022:2010 is the European Union's version of the international CISPR standard CISPR 22:2008.

EN 55024:2010 is the European Union's version of the international CISPR standard CISPR 24:2010.

### 1.2 Detailed description of the test configuration, input and output ports

The 3D Printer was tested while printing a 3D "Rocktopuss". The printer was connected to a laptop through the usb port on the printer. The software was installed on the laptop by Aleph Objects and represents typical software currently used by the end user.

For all test configurations the equipment under test (EUT) is powered by European AC power: 230VAC/50Hz. All I/O cables are less than 3 meters.

#### LulzBot TAZ 5 Software:

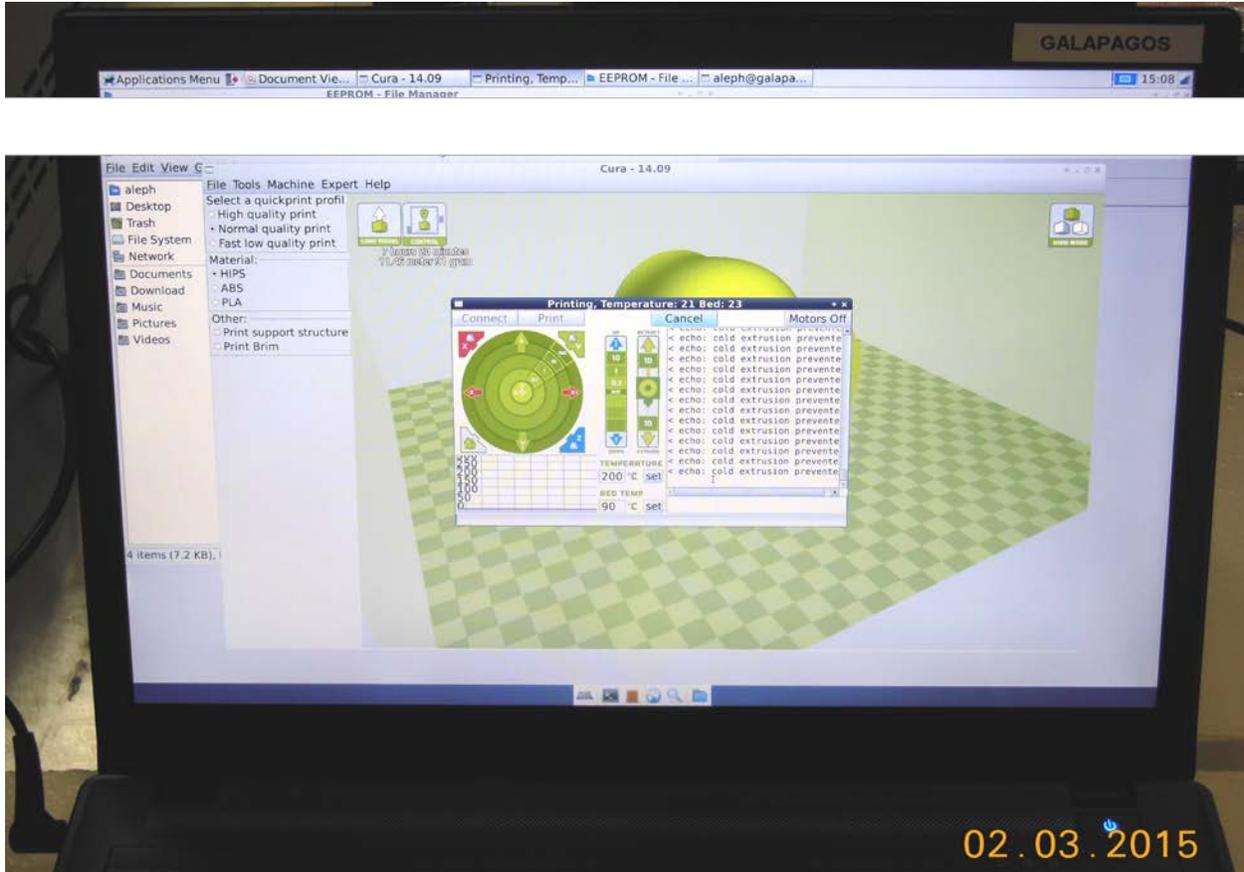

The default software for the LulzBot TAZ 5 3D printer is called Cura LulzBot Edition. Cura is a Free Software program that both prepares your files for printing (by converting your model into GCODE), and also allows you to control the operation of your LulzBot 3D printer. The revision used during the testing was 14.09.

Firmware loaded on the TAZ 5 was Marlin 2014Q4

### 1.2.1 Description of test configuration

EUT : LulzBot TAZ 5 3D Printer  
Manufacturer : Aleph Objects, Inc.  
System model name : TAZ 5  
Serial Number : KT-PR0016-8075  
Test Voltage : 230 VAC 50 Hz

### 1.2.2. Description of tested input and output ports and power supply information

Number of cable type	Type of Cable	From	To	Shielded?	Remarks - length
1	USB	Test Laptop	LulzBot TAZ5	Yes	Typical 6 ft. usb cable, no ferrites

Power supply location	Manufacturer	Model	Serial number	Shielded	Remarks
External AC supply	N/A	PC-240167	PC-1412200510	Plastic enclosure	CE and FCC marks – Output; 24V 16.7A

Test Specification: EN 55022:2010 and EN 55024:2010

Model Name of EUT: LulzBot TAZ 5

Manufacturer: Aleph Objects Inc.

Prepared by EMI Test Lab - EMI Test Lab.com

Revision 1.0

### **1.2.2 Operation modes**

During preliminary testing for emissions it was determined that the following configurations are worst case for emissions and immunity. All further testing was done in these modes.

The system is operating in a typical mode as used by the end user.

The 3D Printer was tested while printing a 3D “Rocktopuss”. The printer was connected to a laptop through the usb port on the printer. The software was installed on the laptop by Aleph Objects and represents typical software currently used by the end user.

Revision 1.0

## **2 Emissions**

The EUT (equipment under test) has been tested to determine conformity with the relevant emissions parts of the EN 55022:2010 standard.

AC Power line conducted and radiated field strength measurements concerning the emission of radiated and conducted electromagnetic disturbances were made.

Harmonic currents at the AC mains connection terminals of the EUT were measured in conformance with and according to EN 61000-3-2.

Voltage fluctuations and flicker at the AC mains connection terminals of the EUT were measured in conformance with and according to EN 61000-3-3.

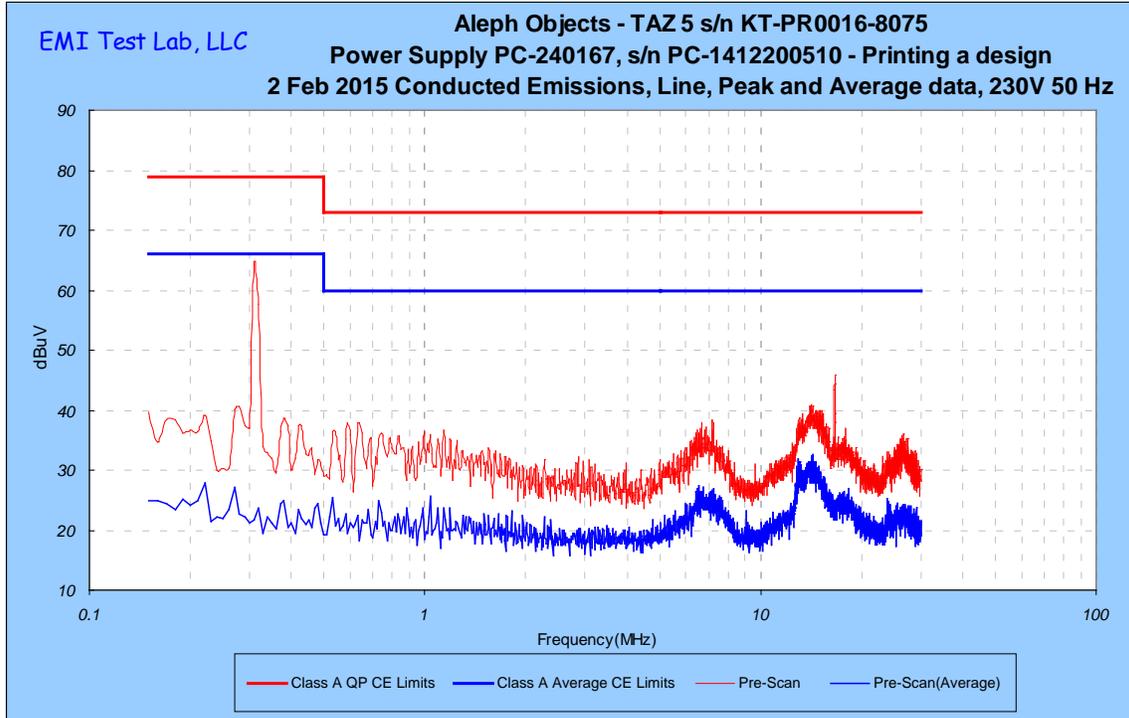

**2.1 AC Mains Power Input Ports**

The disturbance voltage emissions levels at the AC mains power port of the EUT were measured in conformity with and according to the criteria as stated below.

Basic standard	:	CISPR 22:2008
Test setup	:	EN 55022:2010
Frequency range 1	:	0.15 – 0.5 MHz
Limit	:	79.0 dBuV quasi peak, 66 dBuV average
Frequency range 2	:	0.5 – 30 MHz
Limit	:	73 dBuV quasi peak, 60 dBuV average

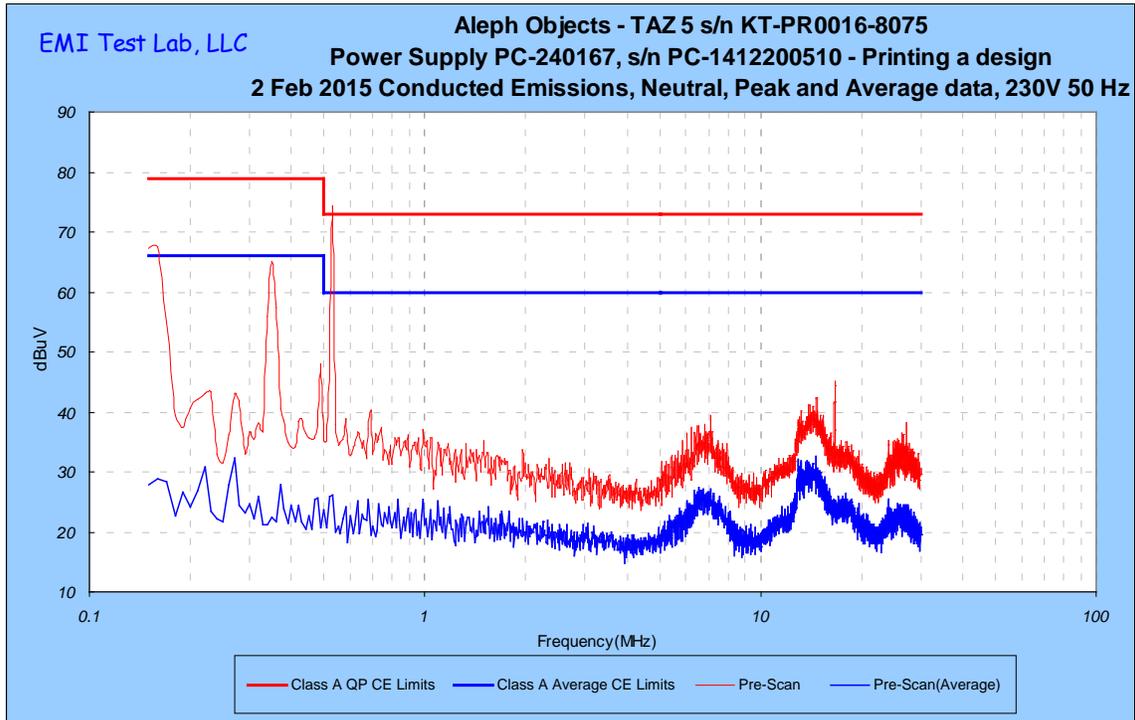

Results of the measurements concerning the emissions of voltage levels at the AC mains input port of the EUT.	<b><u>PASS Class A</u></b>
Name of Test Engineer:	Dennis King
Signature:	
Date:	2 February 2015
Remarks: The configuration was tested at 230VAC 50Hz. <b><u>Conducted Emission Summary:</u></b> <b><u>Peak data was over the Quasi Peak limit but when measured Quasi Peak, those frequencies are passing. All Average scans passed Average limits.</u></b> <b><u>The unit was printing during all conducted emissions tests.</u></b>	

**230 VAC 50 Hz Line**

**Peak passes the Quasi Peak (upper) and Average (lower) limits**

**Red is peak and blue is average**

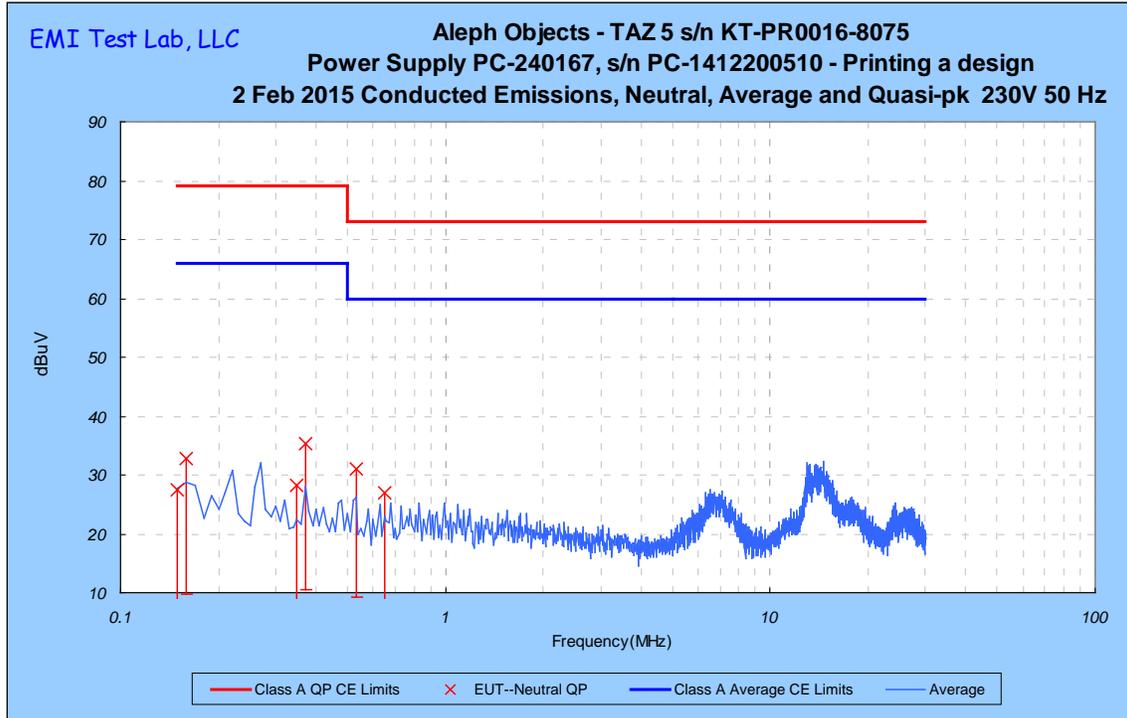

**230 VAC 50 Hz Neutral**

**Peak is over the Quasi Peak (upper)limit so Quasi Peak readings were taken – see the next chart**

**Average (lower) limit passes**

**Red is peak and blue is average**

Frequency(MHz)	QP Disturbance (dBuV)	QP Limit	Margin QP (dB)	Transducer Connection	Correction Factor (dB)
0.150	27.50	79.00	51.50	AMN	0.20
0.370	35.36	79.00	43.64	AMN	0.26
0.650	26.92	73.00	46.08	AMN	0.48
0.160	32.70	79.00	46.30	AMN	0.20
0.351	28.26	79.00	50.74	AMN	0.26
0.530	31.14	73.00	41.86	AMN	0.34

**Quasi Peak passes the Quasi Peak limit**

## 2.2 Enclosure

### 2.2.1 30-1,000 MHz

The radiated field strength levels (electric component) have been measured in conformity with and according to the criteria as stated below.

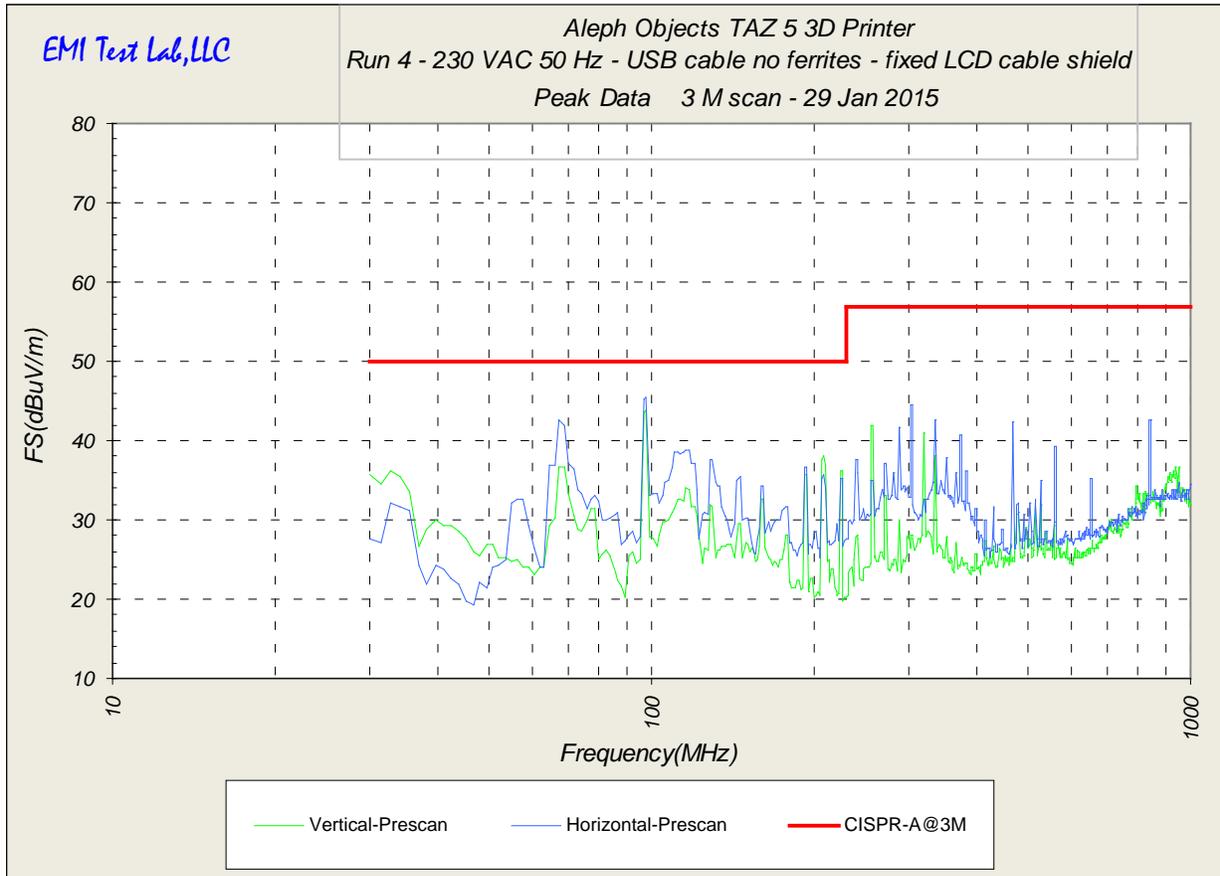

Basic standard	:	CISPR 22:2008
Test setup	:	EN 55022:2010
Limit distance	:	3 meters
Frequency range 1	:	30 -230 MHz
Limits	:	50 dBuV/m
Frequency range 2	:	230 – 1,000 MHz
Limits	:	57 dBuV/m

Results of the measurements concerning radiated electromagnetic fields (electric component) emitted by the EUT, enclosure, as a tested system	<b><u>PASS Class A</u></b>

### 3 Immunity

The EUT has been tested in conformity with parts of the standard EN 55024:2010 (immunity) concerning susceptibility and transient, conducted and radiated disturbances including electrostatic discharges.

#### 3.1 Performance criteria

The general principles (performance criteria) for the evaluation of the immunity test results are given below. The details are in EN 55024:2010

**Performance Criterion A:** The apparatus shall continue to operate as intended during the test. No degradation of performance or loss of function is allowed below a performance level (or permissible loss of performance) specified by the manufacturer, when the apparatus is used as intended.

**Performance Criterion B:** The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level (or permissible loss of function) specified by the manufacturer, when the apparatus is used as intended. During the test, degradation of performance is allowed, however, no change of actual operating state or stored data is allowed.

**Performance Criterion C:** Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls, or by any operation specified in the instructions for use.

### 3.2 Enclosure Port

#### 3.2.1 Radio-frequency electromagnetic field. Amplitude modulated.

The susceptibility of the EUT to radio-frequency electromagnetic fields has been tested in conformity with and according to the criteria as stated below.

Basic standard : EN55024:2010  
Test setup : EN61000-4-3  
Frequency range : 80 MHz to 1000 MHz  
Field strength level : 3 V/m (selected w/o modulation, applied w/mod.)  
Modulation : 1 kHz AM modulation, 80% depth  
Performance criteria : Criteria A

Results of the measurements concerning the susceptibility of the EUT to radio-frequency electromagnetic fields	<b><u>PASS Criteria A</u></b>
Name of Test Engineer:	Dennis King
Signature:	
Date:	30 January 2015
Remarks:	<b><u>No loss of performance was observed during and after the test, all sides and both antenna polarizations meet Performance Criteria A.</u></b> <b><u>Radiated Immunity Summary:</u></b> <b>Configuration :The printer was printing during the entire test: <span style="color: green;">PASS 3 V/M</span></b>

### 3.2.2 Electrostatic discharge

The susceptibility of the EUT to electrostatic discharge was tested.

Basic standard	:	EN 55024:2010
Test setup	:	EN 61000-4-2
Test levels	:	+/- 2,4kV and +/- 8 kV air discharge +/- 2kV and +/- 4 kV contact discharge +/- 2kV and +/- 4 kV, indirect, horizontal and vertical coupling plane.
Performance criteria	:	B

Results of the test concerning the susceptibility of the EUT to electrostatic discharges (enclosure port)	<b><u>Pass Criteria B (with conditions)</u></b>
Name of Test Engineer:	Dennis King
Signature:	
Date:	4 February 2015
Remarks: The printer had problems when the discharge was made to the box around the electronics or the LCD display. <b><u>Conditions of Acceptability:</u></b> A statement will be made in the user guide to use esd precautions when touching the unit, either discharging to an earth ground or wearing an esd strap. Per the Manufacturer, this is acceptable operation of the EUT.	

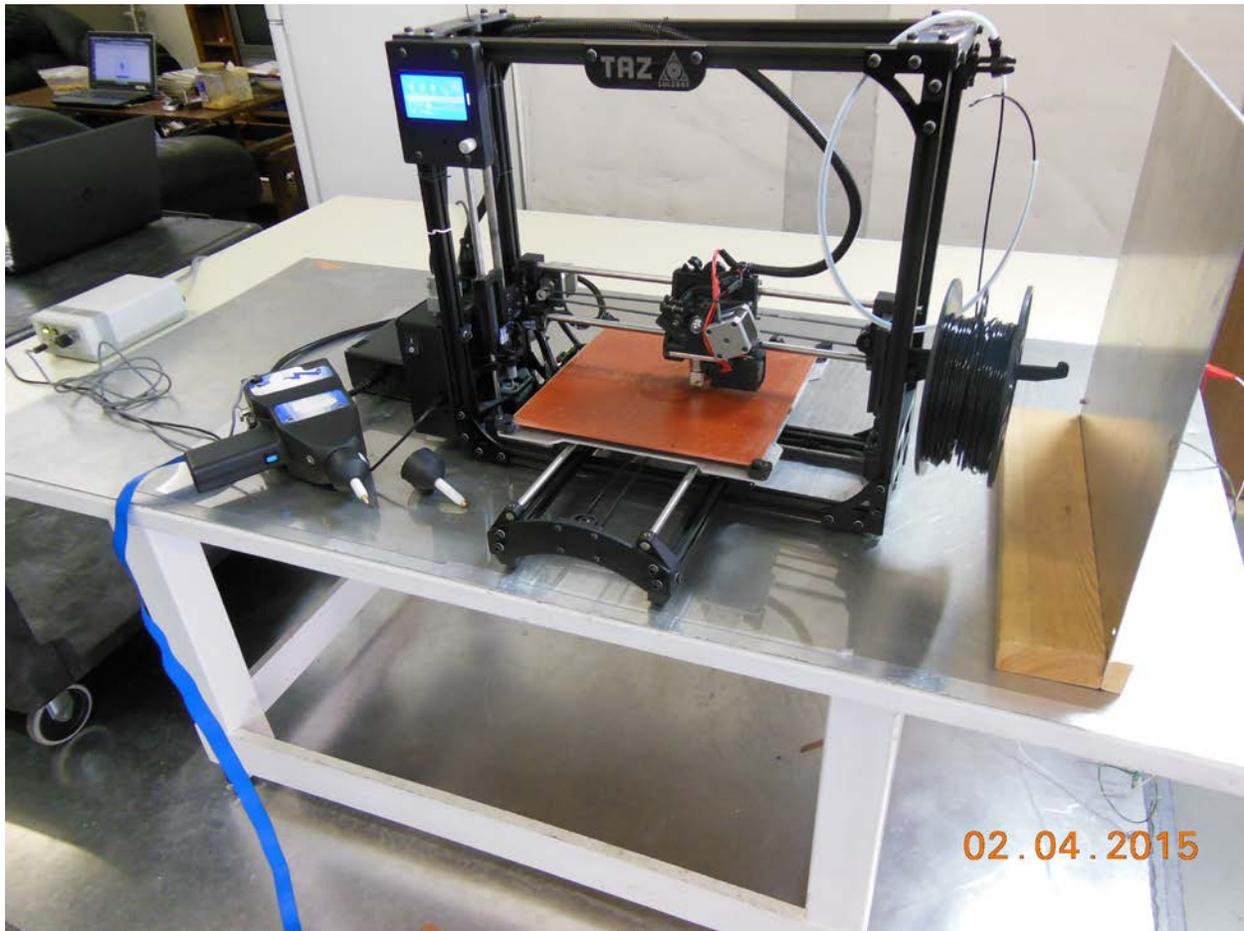

Test Specification: EN 55022:2010 and EN 55024:2010

**Signal ports including telecommunication ports**

**3.2.3 Radio-frequency (common mode). Amplitude modulated**

The susceptibility of the EUT to radio-frequency (common mode, amplitude modulated) signals to be tested in conformity with and according to the criteria as stated below

Basic Standard	:	EN 55024:2010
Test setup	:	EN 61000-4-6
Frequency range	:	0.15 – 80 MHz
Test level	:	3 Vrms
Modulation	:	1 kHz AM to a depth of 80%
Source impedance	:	150 Ohms
Performance criteria	:	Criteria A

**Note: Conducted only on ports interfacing with cables whose total length, according to the manufacturer’s functional specification, may exceed 3 meters.**

Results of the test concerning the susceptibility of the EUT to radio-frequency signals (common mode, AM modulated applied to signal and telecom ports)	<b><u>Not Applicable</u></b>
Name of Test Engineer:	Dennis King
Signature:	
Date:	23 February 2015
Remarks: There are no interconnecting cables on the unit that exceed 3 meters. See the test plan.

### 3.3.2 Surges

The susceptibility of the EUT to surges has been tested in conformity with and according to the criteria as stated below

Basic Standard	:	EN 55024:2010
Test setup	:	EN 61000-4-5
Test level 1	:	+/- 0.5 kV, +/- 1.0 kV, Differential mode
Test level 2	:	+/- 0.5 kV, +/- 1.0 kV, +/- 2 kV Common Mode
Tr/Th	:	1.2/50(8/20) micro Seconds
Number of pulses		
Per phase angle/voltage	:	5
Performance criteria	:	Criteria B
Note	:	<b><u>Applicable only to input AC ports</u></b>

Results of the test concerning the susceptibility of the EUT to surges (AC input and AC output power ports)	<b><u>Pass Criteria A</u></b>
Name of Test Engineer:	Dennis King
Signature:	
Date:	3 February 2015
Remarks:	Tested at the highest voltage levels since this is a confirmation of the original passing data from the power supply manufacturer. <b>PASS</b>

Test Specification: EN 55022:2010 and EN 55024:2010

### 4.0 Modifications

A blue LCD cable connector was used during emissions testing, changing from a more expensive version of the same connector. The results were the same or better using the less expensive connector.

Copper tape was added to the ribbon cable shielding to connect the shield to the metal of the connector in order to get a chassis ground connection.

Test Specification: EN 55022:2010 and EN 55024:2010

Revision 1.0

**5.0 Test equipment and Environmental Conditions**

All tests were conducted within parameters specified for each test, for example >30% humidity for ESD. The lab temperature during all testing was between 70-72 degrees F.

All equipment used for testing has been calibrated or verified for cal using NIST traceable standards. Each piece of test equipment has a cal verification procedure that is conducted before and after each test.

Revision 1.0

## **7.0 Test Plan**

### **Testing required**

The LulzBot TAZ 5 3D Printer will be tested for Class A Emissions per EN 55022 and all applicable Immunity tests per EN 55024 for immunity as required for the EMC portion of the CE Mark.

### **Test Setup**

The LulzBot TAZ 5 will be operating in a typical use mode, printing an object during all the testing.

The user software is installed on a laptop and is controlling the 3D printer. There are no other I/O cables on the 3D Printer.

Typical software that the end user would use will be used during the testing.

### **Failure Criteria**

If the unit stops working or the printing process is altered by the injected noise, this would be considered a failure.

### **I/O cables**

The unit has only one I/O cable, the USB cable that is used to control the printer from software installed on the host computer. There are no I/O cables on the unit 3 meters or longer.

### **Status of the test unit**

Production level.

## **8.0 Conclusion**

**The Aleph Objects – LulzBot TAZ 5 3D Printer  
complies with the emissions standard EN 55022:2010  
and the immunity standard EN 55024:2010  
in the configurations and operating modes as stated in this test report.**

**End of Report**
